## 2. Deskripsi Singkat Program

Program ini dibuat multiuser yakni bisa diakses sebagai admin maupun pengguna biasa, saat mengakses sebagai admin kita dapat mengetahui bagaimana sistem top up berjalan yang dimana kita dapat melakukan create yaitu menambahkan data top up, read yaitu melihat data top up yang sudah ada ataupun saat sudah terganti, update yaitu mengubah data data yang sudah ada seperti mengubah jumlah item ataupun mengubah harga, serta delete yaitu menghapus data yang sudah ada, sementara saat mengakses sebagai pengguna biasa kita dapat melakukan register akun terlebih dahulu lalu melakukan login dengan memasukkan username dan password setelah itu dapat  melihat katalog, melakukan top up dengan memasukkan id, memilih paket, dan jumlah paket top up, dan juga dapat mengecheck transaksi.

## 3. Source Code

### A. Dictionary untuk menyimpan katalog game

Fitur ini digunakan untuk menyimpan data paket game, harga, dan status ketersediaan menggunakan dictionary.

```
katalog = {
    "Mobile Legends": {
        86: {"harga": 20000, "status": "tersedia"},
    },
    "Free Fire": {
        70: {"harga": 10000, "status": "tersedia"}
    },
    "PUBG": {
        60: {"harga": 15000, "status": "tersedia"}
    },
    "Roblox": {
        80: {"harga": 15000, "status": "tersedia"}
    }
}
akun_player = {}
transaksi = {}
nomor_transaksi = 1
```

## B. Login Admin

Fitur ini memeriksa username dan password Admin yang sudah ditentukan saat program dimulai.

```
username = input("Username: ")

password = input("Password: ")

if username == “salwa” and password == “65” :

    print("Login Admin berhasil!")

else:

    print("Username atau password salah!")
```

## C. Register dan Login Player

Fitur ini digunakan untuk player membuat akun sendiri dan melakukan login sebelum top up.

```
username = input("Username: ")

password = input("Password: ")

if username in akun_player:

    if akun_player[username] == password:

        print("Login Player berhasil!")

    else:

        print("Password salah!")

else:

    print("Username tidak terdaftar!")
```

## D. CRUD Admin

Fitur ini digunakan Admin untuk menambah, melihat, mengubah, dan menghapus data yang ada pada sistem.

```
game = "Mobile Legends"

item = 257

harga = 60000

katalog[game][item] = {

    "harga": harga,

    "status": "tersedia"

}

print("Paket berhasil ditambahkan!")

for game, paket_game in katalog.items():

    print("\nGame:", game)

    for item, data in paket_game.items():

        print("Item:", item)

        print("Harga: Rp", data["harga"])

        print("Status:", data["status"])

game = "Mobile Legends"

item = 86

katalog[game][item]["harga"] = 25000

katalog[game][item]["status"] = "tidak tersedia"

print("Data paket berhasil diperbarui!")
```

```
game = "Mobile Legends"

item = 172

if item in katalog[game]:

    del katalog[game][item]

    print("Paket berhasil dihapus!")

else:

    print("Paket tidak ditemukan!")
```

### E. Fungsi perhitungan total harga dan item

Fitur ini digunakan untuk menghitung total harga dan total item berdasarkan jumlah paket yang dibeli. Penggunaan int() juga mencegah angka berulang seperti masalah sebelumnya.

```
def hitung_total(harga, jumlah):
    total_harga = int(harga) * int(jumlah)
    return total_harga
def hitung_item(item, jumlah):
    total_item = int(item) * int(jumlah)
    return total_item
```

### F. Transaksi Top Up Player

Fitur ini digunakan player untuk membeli paket game, memasukkan ID, menghitung total pembayaran, dan menyimpan transaksi.

```
if player != "" and jumlah > 0:

    total = paket["harga"] * jumlah
```

```
    total_item = paket["item"] * jumlah

    pesanan = {

        "nomor": nomor_transaksi,

        "player": player,

        "game": game,

        "item": total_item,

        "satuan": satuan,

        "total": total,

        "status": "Menunggu"

    }

    transaksi.append(pesanan)

    print("\n=== DETAIL PESANAN ===")

    print("No Transaksi:", nomor_transaksi)

    print("Game:", game)

    print("ID Player:", player)

    print("Jumlah:", total_item, satuan)

    print("Total Harga: Rp", total)

    print("Status: Menunggu")

    nomor_transaksi += 1

else:

    print("Data tidak valid!")

else:

    print("Pilihan paket tidak tersedia!")
```

## G. Update status transaksi oleh Admin

Fitur ini digunakan Admin untuk memperbarui status pesanan dan Player dapat melihat status terbaru.

```
game = "Mobile Legends"

item = 86

jumlah = 2

id_player = input("Masukkan ID Player: ")

if item in katalog[game] and katalog[game][item]["status"] == "tersedia":

    harga = katalog[game][item]["harga"]

    total = hitung_total(harga, jumlah)

    total_item = hitung_item(item, jumlah)

    transaksi[nomor_transaksi] = {

        "username": username,

        "player": id_player,

        "game": game,

        "paket": item,

        "harga_satuan": harga,

        "jumlah_paket": jumlah,

        "item": total_item,

        "total": total,

        "status": "Menunggu"
```

```
    }

    print("\n===== STRUK TOP UP =====")

    print("No Transaksi:", nomor_transaksi)

    print("Game:", game)

    print("ID Player:", id_player)

    print("Total Item:", total_item)

    print("Total Harga: Rp", total)

    print("Status: Menunggu")

    nomor_transaksi += 1

else:

    print("Paket tidak tersedia!")
```

## H. Penggunaan Library PrettyTable

berikan source codenya sertakan hanya bagian kode yang berisi fitur penting dari program. Tidak perlu memasukkan seluruh kode, cukup bagian yang relevan dengan fungsionalitas utama.

```
from prettytable import PrettyTable

from colorama import Fore, Style, init

init(autoreset=True)
```

## I. Menu Player

Fitur ini memberikan pilihan menu kepada Player untuk melakukan top up, melihat katalog, melihat riwayat transaksi, dan logout.

```
while True:
    print("\n===== MENU PLAYER =====")
    print("1. Lihat Katalog")
    print("2. Top Up Game")
    print("3. Lihat Riwayat Transaksi")
    print("4. Logout")
    pilihan = input("Pilih menu: ")
    if pilihan == "1":
        lihat_katalog()
    elif pilihan == "2":
        proses_topup(username)
    elif pilihan == "3":
        cek_transaksi(username)
    elif pilih == "4":
            print("\nLogout Player berhasil!")
            break
        else:
```

```
            print("\nPilihan menu tidak tersedia!")
```

### J. Riwayat Transaksi Player

Fitur ini digunakan untuk menampilkan daftar transaksi yang pernah dilakukan oleh Player beserta detail dan status pesanannya.

```
tabel = PrettyTable()
tabel.field_names = [
    "No Transaksi",
    "Game",
    "ID Player",
    "Total Item",
    "Total Harga",
    "Status"
]
for id_transaksi, data in transaksi.items():
    if detail["username"] == username:
        tabel.add_row([
            id_transaksi,
            detail["game"],
```

```
            detail["player"],
            detail["item"],
            f"Rp{data['total']:,}",
            detail["status"]
        ])
print(tabel)
```

## K. Membersihkan Terminal Menggunakan Library OS

Fitur ini digunakan untuk membersihkan tampilan terminal menggunakan library os. Terminal dibersihkan ketika diperlukan, tetapi setelah proses register atau login, tampilan tidak langsung dihapus.

```
import os
def bersihkan_terminal():
    os.system("cls" if os.name == "nt" else "clear")
```

## 4. Hasil Output

```
PS C:\praktikum-apd-2026\posttest\posttest-apd-8> python main.py

```

## 5. Langkah-langkah Git

## 5. 1 Git Add

```
PS C:\praktikum-apd-2026\posttest\posttest-apd-8> git add .
PS C:\praktikum-apd-2026\posttest\posttest-apd-8>
```

git add . digunakan untuk menambahkan semua file

## 5.2 Git Commit

```
PS C:\praktikum-apd-2026\posttest\posttest-apd-8> git commit -m "posttest 8"
[main 363fb4b] posttest 8
 9 files changed, 880 insertions(+)
 create mode 100644 posttest/posttest-apd-8/__pycache__/admin.cpython-313.pyc
 create mode 100644 posttest/posttest-apd-8/__pycache__/data.cpython-313.pyc
 create mode 100644 posttest/posttest-apd-8/__pycache__/fungsi.cpython-313.pyc
 create mode 100644 posttest/posttest-apd-8/__pycache__/player.cpython-313.pyc
 create mode 100644 posttest/posttest-apd-8/admin.py
 create mode 100644 posttest/posttest-apd-8/data.py
 create mode 100644 posttest/posttest-apd-8/fungsi.py
 create mode 100644 posttest/posttest-apd-8/main.py
 create mode 100644 posttest/posttest-apd-8/player.py
PS C:\praktikum-apd-2026\posttest\posttest-apd-8>
```

git commit digunakan untuk melakukan commit atau konfirmasi perubahan yang terjadi pada repository.

## 5.3 Git Push

```
PS C:\praktikum-apd-2026\posttest\posttest-apd-8> git push -u origin main
Enumerating objects: 21, done.
Counting objects: 100% (21/21), done.
Delta compression using up to 2 threads
Compressing objects: 100% (17/17), done.
Writing objects: 100% (17/17), 16.62 KiB | 395.00 KiB/s, done.
Total 17 (delta 2), reused 0 (delta 0), pack-reused 0 (from 0)
remote: Resolving deltas: 100% (2/2), completed with 1 local object.
To https://github.com/sallssb/praktikum-apd-2026.git
   8239285..e1e6dbb  main -> main
branch 'main' set up to track 'origin/main'.
PS C:\praktikum-apd-2026\posttest\posttest-apd-8>
```

git push digunakan untuk mengunggah hasil file ke github tanpa harus membuka websitenya.
